NORMALIZATION

BY: DR ERIC AFFUM

Read the following materials

CHAPTER 6

Coronel, C. and Morris, S. (2018), Database Systems: Design, Implementation, & Management, Cengage Learning, Boston, U.S.A., 13th Edition, 816 pp

Database Normalization

 **Normalization** - It is the process of removing redundant data from tables in a given database in order to improve storage efficiency, data integrity.

Database Normalization

There are currently five normal forms that have been defined and these are:

- ❖ First Normal Form(1NF)
- ❖ Second Normal Form(2NF)
- ❖ Third Normal Form(3NF)
- ❖ Boyce-Codd Normal Form(4NF)
- ❖ Domain-key Normal Form (5NF)

1NF

- ❖ Eliminate duplicative columns from the same table.
- ❖ Every table should have a primary key

OR

- ❖ A relation R is in first normal form (1NF) if and only if all underlying domains contain atomic values only

Four basic rules to achieve 1st normal form

TABLE		
Column 1	Column 2	
A	X, Y	
B	W, X	
C	Y	
D	Z	

RULE 1

- Each Column should contain atomic values.
- Entries like X, Y and W, X violate this rule.

Four basic rules to achieve 1st normal form

TABLE

Column 1	Column 2	
A	X, Y	
B	W, X	
C	Y	
D	Z	

RULE 1

- Each Column should contain atomic values.
- Entries like X, Y and W, X violate this rule.

Four basic rules to achieve 1st normal form

TABLE		
DOB	Name	
26-10-89	A	
13-2-92	SK	
16-11-65	SA	
R	8-9-86	

RULE 2

- A Column should contain values that are of the same type.
- Do not inter-mix different types of values in any column.

Four basic rules to achieve 1st normal form

TABLE

DOB	Name	
26-10-89	A	
13-2-92	SK	
16-11-65	SA	
R	8-9-86	

RULE 2

- A Column should contain values that are of the same type.
- Do not inter-mix different types of values in any column.

Four basic rules to achieve 1st normal form

TABLE

DOB	Name	Name
26-10-89	A	A
13-2-92	S	K
16-11-65	S	A
8-9-86	R	A

RULE 3

- Each column should have a unique name.
- Same names leads to confusion at the time of data retrieval

Four basic rules to achieve 1st normal form

TABLE

DOB	Name	Name
26-10-89	A	A
13-2-92	S	K
16-11-65	S	A
8-9-86	R	A

TABLE

DOB	F_Name	L_Name
26-10-89	A	A
13-2-92	S	K
16-11-65	S	A
8-9-86	R	A

Four basic rules to achieve 1st normal form

TABLE

Roll_no	F_Name	L_Name
3	A	A
4	S	K
1	S	A
2	R	A

RULE 4

- Order in which data is saved doesn't matter.
- Using SQL query, you can easily fetch data in any order from a table.

Four basic rules to achieve 1st normal form

STUDENTS TABLE		
rollno	name	subject
101	Akon	OS, CN
103	Ckon	JAVA
102	Bkon	C, C++

How to solve this?

**Violation of
1 NF**

Four basic rules to achieve 1st normal form

**How to
solve
this?**

STUDENTS TABLE		
rollno	name	subject
101	Akon	OS
101	Akon	CN
103	Ckon	JAVA
102	Bkon	C
102	Bkon	C++

2NF

- ❖ Meet all the requirements of the first normal form.
- ❖ A relation R is in second normal form (2NF) if and only if it is in 1NF and every non-key attribute is fully dependent on the primary key

2NF

STUDENTS TABLE				
student_id	name	reg_no	branch	address
1	Akon	CSE-18	CSE	TN
2	Akon	IT-18	IT	AP
3	Bkon	CSE-18	CSE	HR
4	Ckon	CSE-18	CSE	MH

As the **student_id** in this table will be unique, it can be used easily to fetch any data.

2NF

STUDENTS TABLE

student_id	name	reg_no	branch	address
10	Akon	CSE-18	CSE	TN

This is Dependency or
Functional Dependency

2NF

SCORE TABLE

score_id	student_id	subject_id	marks	teacher
1	10	1	82	Mr. J
2	2	2	77	Mr. C++
3	3	3	85	Mr. J
4	4	4	82	Mr. C++
5	5	5	95	Mr. P

teacher column only
depends on subject
and not on student.

2NF

SCORE TABLE

score_id	student_id	subject_id	marks	teacher
1	10	1	82	Mr. J
2	2	2	77	Mr. C++
3	3	3	85	Mr. J
4	4	4	82	Mr. C++
5	5	5	95	Mr. P

teacher column only
depends on subject
and not on student.

This is partial dependency

2NF

score_id	student_id	subject_id	marks	teacher
1	10	1	82	Mr. J
2	2	85	77	Mr. C++
3	3	82	85	Mr. J
4	4	2	82	Mr. C++
5	11	4	95	Mr. P

subject_id	subject_name
1	Java
2	C++
3	C#
4	Php

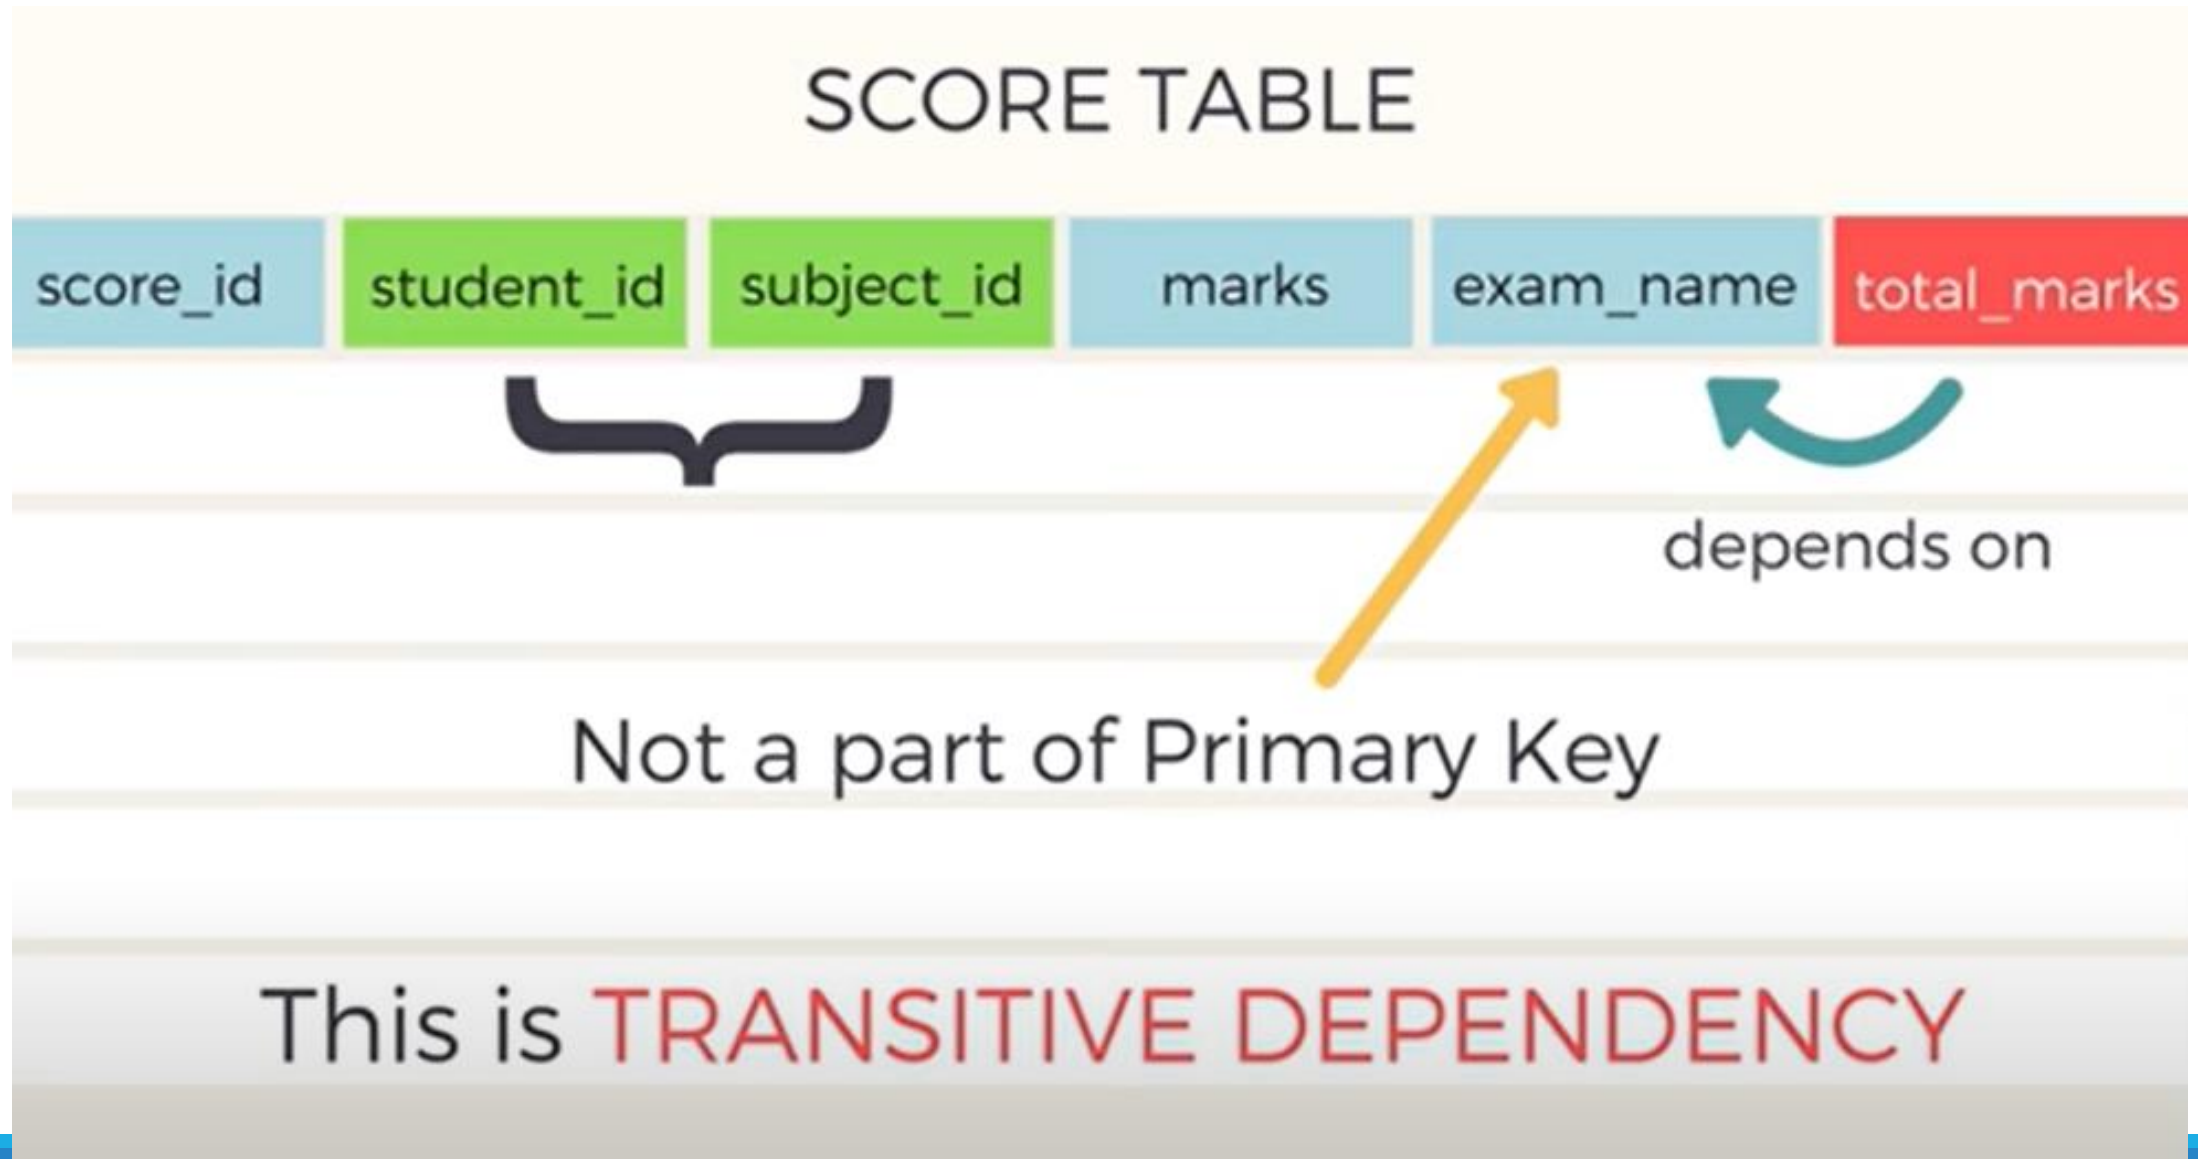

Move **teacher** column to **Subject table**

3NF

There are two basic requirements for a database to be in third normal form:

- ✧ Already meet the requirements of both 1NF and 2NF
- ✧ Remove columns that are not fully dependent upon the primary key

3NF

3NF

SCORE TABLE

score_id

student_id

subject_id

marks

exam_name

total_marks

EXAM TABLE

3NF

student_id name reg_no branch address

Student Table

subject_id subject_name teacher

Subject Table

score_id student_id subject_id marks exam_name

Score Table

exam_name total_marks

Exam Table

In 3NF
